

Camp Kit Caddy, 22 in

A steel caddy that carries and stores one knock-down camp kit (the PG20 Pack Grill, VG18 V Grill or OF20 Overland Fire Pan). The plates stand in it like files on both sides of a center handle. Seven laser-cut 10 ga parts slot together with no tools and no welding.

What's in the box

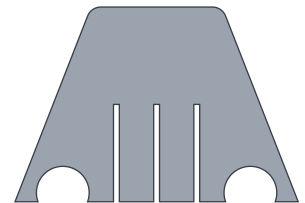

Spine x1
Part KC22-01

Side frame x2
Part KC22-02

Floor x2
Part KC22-03

End foot x2
Part KC22-04

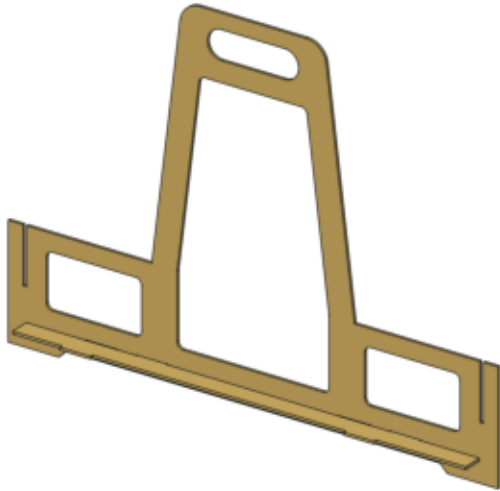

What you'll need

- No tools needed

Camp Kit Caddy, 22 in

1

Hook the floors into the spine

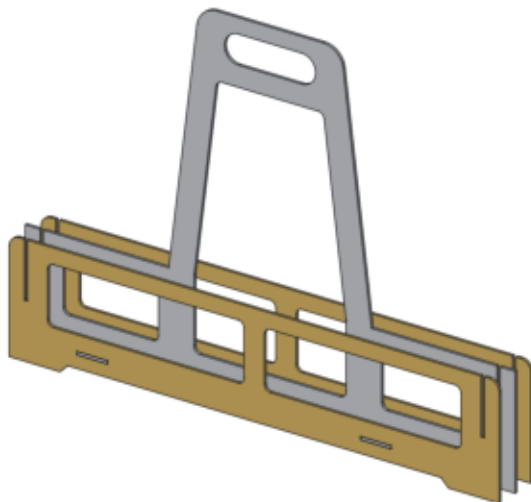

Stand the spine on its edge, handle up. Push each floor's two short tabs into the spine's low slots, one floor from each side, so the floors stick out level like shelves. The floors are identical; their off-center tabs only fit one way round.

TIP

Work on a flat floor or bench.

2

Add the side frames

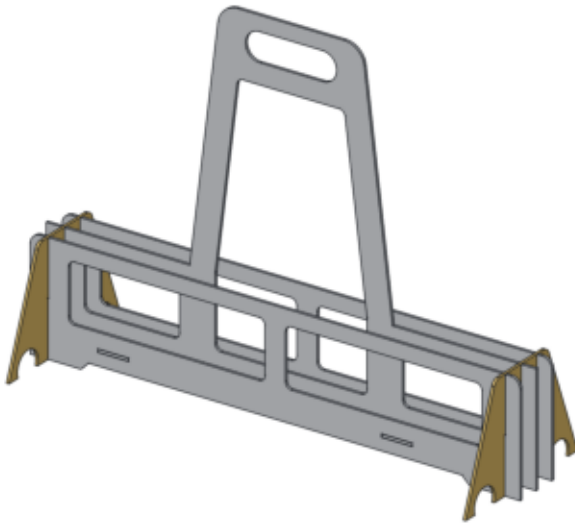

Push a side frame onto each floor's two outer tabs, so the tabs come through flush. The side frames are identical; the slots across their top edges go at the ends, with the spine's.

Camp Kit Caddy, 22 in

3

Drop on the end feet

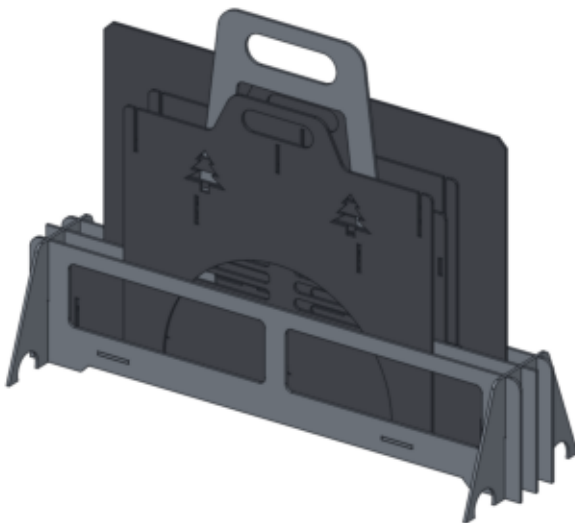

Lower an end foot straight down over each end, so its three slots drop over the slots in the spine and the side frames. It seats when the tops line up, and it locks the caddy square.

TIP

The end feet are identical; either way round fits.

4

Load a kit and carry it

Split the kit's plates between the two bays, biggest plates on the outside, small parts like the ribs at the bottom. Carry it by the center handle.

TIP

Load only cold parts.

Slip a 6 in piece of split garden hose over the handle for a padded grip.

Camp Kit Caddy, 22 in

Finishing

- The parts ship bare with a light oil film. Wipe them down before you load a kit.
- Leave it bare, or paint it with any spray paint for metal. It never gets hot.
- Store it dry; a light coat of oil keeps bare steel from rusting.

Safety

- A loaded caddy weighs up to about 50 lb. Lift with your legs, and carry it close to your body.
- Load only cold parts. Let a grill or fire pan cool completely before you take it apart.
- Laser-cut edges can be sharp. Wear gloves while you assemble and load it.
- Carry it by the handle only. Don't lift it by an end foot, which can pull off.
- It's for carrying and storing kit parts only. Don't stand on it or use it as a step.

This is a kit of raw steel parts that slots together. How you assemble it and where and how you use it are yours to judge. If you weld it, use proper ventilation and protective gear.
